Terrell Owens Undergoes Surgery

Terrell Owens recently had surgery to repair a torn anterior cruciate ligament(ACL). Dr. James Andrews occurred within the past month. Some speculations say Terrell hurt his knee while taping a his show for VH1. Another source said Owens tore the ACL during a personal workout but other sources could not confirm the cause of injury. Nonetheless, this isnt the first knee injury for Terrell, December 2010 remember? Owens' 2010 season for the Cincinnati Bengals came to a halt when he tore his meniscus cartilage in his left knee on Dec. 19 against the Cleveland Browns in week 14. The same surgeon, Dr. Andrews surgically repaired Owens' meniscus on Dec. 20.

Some skeptics are worried because Terrell will be a free agent when the NFL lockout ends -IT DONT MATTER...this is Terrell IF he desires to play-HE WILL!!! YEAH I SAID IT!
